

Add Delay

Add Delay is an extension that adds animation delay to copies of layers.

Installation

- Download the ZXP Installer and install AddDelay.zxp with it. <https://aescripts.com/learn/zxp-installer/>
If it doesn't work, rename .ZXP to .ZIP, extract the folder and copy it to Adobe's Extension folder.
- You can see the Add Delay extension in the Window > Extensions menu at the top of the software.
- Open the AE Preferences, navigate to "Scripting & Expressions", check the first box to allow the script to read, write, and access the network.

Usage

- Create your main layer and make several copies of it
- Select your main layer and the copies or layers you want to affect
- In the extension window, select the checkbox for the property or properties ① you want to connect to the main layer and press the “+” button. ② (to remove the expressions press “-”) ③
- Now add some keyframes to your main layer (the topmost layer) and adjust the delay using the slider control on your main layer (in seconds) in the Effect Controls window.

Properties to affect:

Pos	Position
X	X Position
Y	Y Position
Z	Z Position
Anchor	Anchor Point
Scale	Scale
Rotation	Rotation
X Rot	X Rotation
Y Rot	Y Rotation
Z Rot	Z Rotation
Opa	Opacity
Time	Time Remapping
